Welcome to Krypta

What is Krypta?

Krypta is an interactive logic-puzzle based game which tests your foresight and logic skills against objectives in a fun sandbox environment.

The Story

You are Magnus Venture, a young, avid explorer with a great allure for treasure and all things antiquity.

You're at the rumoured location of a fabled temple in the Great Desert that has yet to be unearthed and ransacked of all its possessions. While scouting the area for signs of the ruins you find yourself slipping through the dunes down into the depths of the legendary Krypta dungeon – the fabled temple of the Gods.

Delve deep into the Krypta dungeon and forage in forbidden and forgotten territory to quench your lust for treasure and riches – but beware of the many traps and enemies that hide and lurk inside. The deeper you delve the more perilous your journey becomes. It's up to your deductive thinking and puzzle solving abilities to ensure you obtain treasures but more importantly find an escape and stay alive!

The Objective

The objective of the game is for the player to collect treasure, avoid enemies and solve logic puzzles in order to reach the end of each floor in the shortest amount of time – with each floor becoming more increasingly challenging.

Krypta Components

The Game

The Game is the piece of software that allows you to interact and play the game. The client interface will allow you to play the campaign mode, load in and play custom maps that have been created by the Map Editor, check your achievements, and change your settings.

The Map Editor

The Map Editor is an extension onto the Krypta program that will allow you to create your own maps to test your abilities and share maps with your friends to see who can solve each other's puzzles and dungeons.

System and Software Requirements

The game should be installed on any windows platforms from Windows XP onwards for both 32 and 64 bit machines.

Krypta Map Editor Requirements

The recommended system requirements for the Krypta package are:

- Processor: 1 GHz 32-bit or 64-bit processor
- Memory: 1 GB of system memory
- Hard drive: 4 GB of available disk space
- Video card: Support OpenGL 3.0+ Drivers
- Video RAM: 512mb minimum

Krypta Game Requirements

The recommended system requirements for the Krypta package are:

- Processor: 1 GHz 32-bit or 64-bit processor
- Memory: 1 GB of system memory
- Hard drive: 4 GB of available disk space
- Video card: Support OpenGL 3.0+ Drivers
- Video RAM: 512mb minimum

Installation Guide

Installation:

1. Go to www.kryptagame.com/download and download the Krypta package.
2. Extract the files from the package and run the Installation.exe file.
3. Follow the prompts and accept the security permissions.
4. To start the game, navigate to the Krypta program through the start menu or the Krypta icon on the desktop.

Characters and Enemies

Magnus Venture

Take control of Magnus Venture – the young avid explorer to acquire treasure and riches. Guide Magnus around the Krypta dungeon to collect gold, avoid enemies and reach the end of each level.

Enemies

There's a host of enemies that plague's the depths of the Krypta dungeon, each with their own style of attack and methods to hunt you down.

Mummies

Mummies roam the dungeon – shells of former adventurer's that once attempted to best the Krypta dungeon. They're doomed to forever roam mindlessly and will attack and kill anyone who threatens to steal their treasure.

Characters and Enemies

Snakes

Snakes have taken up residence throughout the dungeon nesting in chests, pots and behind doors. The snakes are venomous and cause a host of status ailments and non-lethal effects that hinder your progress. The only way to stop the encumbrance of venom is to find the anti-venom along the dungeon path.

Scarabs

Scarab beetles are quick and agile and can be quite deadly if you're not careful. Scarab beetles will set off traps and can steal your gold and keys if they touch you when they fly past. They also produce noise that will alert any more enemies that are nearby. Make sure to step on them to kill them and get your loot back!

Tools

At the beginning of each map the player will have the choice of five tools. A player must only carry two tools to be allowed to enter the map. Each tool provides an advantage or interaction with the environment. The tools that are available are:

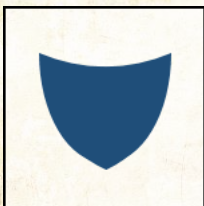

Bird

The bird tool acts as a deployable scout with a time limit on flight. It can ignore floor based traps but can't avoid combat, gas or ranged traps. The bird can also make noise to attract the attention of enemies within proximity.

Boots

Boots increase the speed of the player making it easier to evade obstacles and decreases the sound emitted by the characters movements. They can act favourably with game elements such as breakable tiles lasting twice as long.

Shield

The shield is a defensive combat tool that safeguards against one lethal attack from an enemy and is then destroyed, acting as a life line for the player.

Tools

At the beginning of each map the player will have the choice of five tools. A player must only carry two tools to be allowed to enter the map. Each tool provides an advantage or interaction with the environment. The tools that are available are:

Sword

This weapon gives you a form of direct offense. It can be used to kill enemies from a distance. If attacking the enemy from behind, it will be a 100% kill rate however if the attacked head on it will be a 50/50 chance.

Torch

The torch increases the radius of sight of the playable character while also increasing the line of sight of enemies. It can reveal elements that can be seen in natural light i.e. treasure. The torch also interacts with specific properties such as spider webs and gas.

Traps

Bear Traps

The deadly teeth an ancient bear trap await those who wander the dungeon carelessly.

Cracked Tiles

Watch your step! Some dungeon tiles have weakened over the decades. Be sure not to fall through the floor down into the depths of the dungeon.

Floor Spikes

Pressure triggered floor spikes litter the dungeon. Not only will these cause bleeding damage over time, but they will slow you down for a period of time.

Fake Chests and Baskets

Fake chests and baskets are employed to take advantage of the greedy nature of wayward treasure hunters. Status ailments such as poison, confusion and lower visibility will plague the user – but is the risk worth the reward?

Controls

Mouse Controls

Movement around the dungeon is handled by simple point and click style movements with the left mouse button. The mouse button can be held down for continual traversal.

Keyboard Controls

TAB – Access your inventory.

ESC – Pause the game.

How to Play

Campaign

At the Campaign's menu you will be given the chance to choose the campaign that you would like to play. Simply click on the one of your choosing.

Egypt

Krypta test map

How to Play

Interface Display

The interface is very simple and minimalistic. The bottom right hand corner provides you with a view of your tool that you currently have equipped and the bottom left displays the player's health.

Health

Tool

How to Play

Inventory

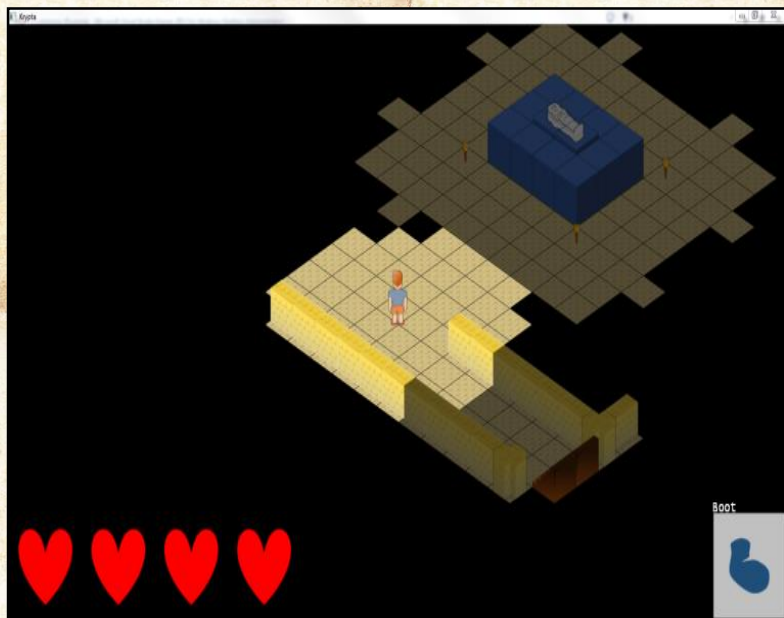

While playing the game you will accumulate items such as keys and gold. In order to check them simply view the inventory by pressing TAB.

How to Play

The Checkpoint / Resting Shrine

Pay your respects to the almighty pharaoh, rest and regenerate while plotting your next path throughout the dungeon..

How to Play

Goals

On your quest to find an escape make sure to be careful of the traps and enemies that will damage you. Lose all your health and you lose your life.

Frequently Asked Questions (FAQ)

How do I register for Krypta?

Registration isn't a necessary step, however it is in order to create and share custom made maps. You can join the community at: kryptagame.com/register

Do I need to register to play?

Not at all – Krypta can be played in full without registering for the game. Registering only allows users to be able to download and share maps through our community.

How do I create my own map?

Choose the “Map Editor” option in the main menu to enter the sandbox area in which you can select from a multitude of tools and settings in which you can create your very own Krypta map, ready to be played and shared among your friends and the community. You can have an in depth look at all of the tools outside of the client at: www.krypta.com.au/create

How can I share my map?

You can share your map by simply sharing the package file that is created for each map. There is a sharing section on our forum where you can give it to the whole community: krypta.com.au/forum

You can view your public profile, or anyone else's at: www.kryptagame.com
